DESCRIPTIVE ABSTRACT

A RECEIVER FOR A CDMA SYSTEM

The receiver includes at least one channel (V_1) with an adapted filter (20) and with a symbol clock signal (Hs) recovery circuit (12) and other channels (V_2, \ldots, V_k) with a sliding correlator $(30_2, \ldots, 30_k)$ using the symbol clock signal (Hs) produced by the channel (V_1) with adapted filter.

Application for radiocommunications with mobiles.
